

LP SMARTSIDE SIDING AND TRIM BY WISCONSIN BUILDING SUPPLY

LP SmartSide siding and trim is arguably the highest quality product in the engineered wood siding category. It cuts like wood and acts like it, so it doesn't get damaged by elements like hail. The product can be finished on site, after it's installed on a home or business, but we recommend taking advantage of the fact that Wisconsin Building Supply is a certified LP Preferred Finisher.

By choosing to have your LP SmartSide siding and trim factory finished at WBS, you're cutting out the factors that negatively affect the quality of a site-applied siding finish. Temperature and humidity — which leave a painter at the mercy of the weather forecast and can cause considerable delays — are controlled during the painting and drying process. Unfinished siding can be shielded from precipitation and direct sunlight, and there is no wind-blown dust and dirt to disturb a paint job as it dries.

FINISH IT YOUR WAY

Our paint application process has been designed so every board receives a uniform finish, which helps retain the beautiful wood grain profile of LP SmartSide products. It also promotes even weathering, creating less maintenance for the homeowner over time. Additionally, prefinishing of LP SmartSide often costs significantly less than on-site painting.

We offer 18 stock colors in LP siding and four stock trim colors. We also back our prefinished SmartSide products with a minimum 30-year finish warranty plus a labor component covering the first five years.

Siding stock colors

Almond	Link gray
Briarwood	North woods brown
Clay	Peppercorn
Cream	Shadow
Dark chocolate	Tan
